Bike Maintenance

Pre-Ride ABC Checklist:

Air

Brakes

Chain

The ABCs of bike maintenance include: checking tire **A**ir pressure, testing if **B**rakes are working, and making sure the **C**hain is well lubricated.

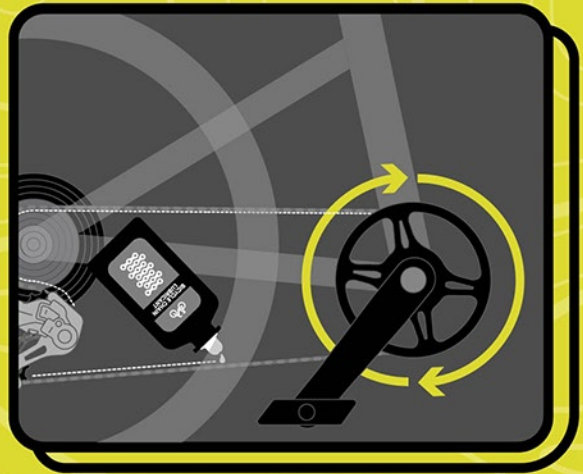

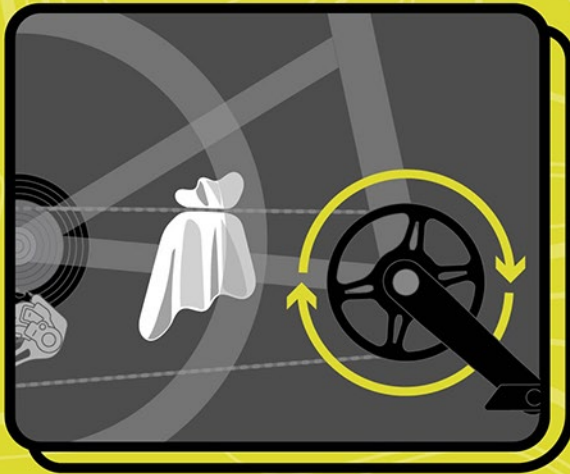

Wheels, Handlebars, Saddle & Battery

Tighten wheel axle bolts. Align and tighten handlebars. Adjust the saddle to a comfortable position, then tighten the clamp. Double check battery power level.

Post-Ride Checklist

Wipe and remove dirt or mud stuck in the chain and derailleur with a dry rag or soft bike brush. Apply chain lube if necessary.

Cleaning your Chain

For simple and easy cleaning, all you have to do is use an old towel and wipe down the chain and crankset.

For a deeper and more thorough cleaning, use a chain degreaser that's made specifically for bikes. Then add a thin coat of bike chain lubricant.

Pro Tips!

- ✔ Clean drivetrain at least once a week.
- ✔ Check to ensure battery contacts are clean and dry so as to prevent corrosion.
- ✔ Avoid pressurized water when cleaning.
- ✔ Shifting cables change in tension over time. Make adjustments when necessary to optimize for smooth shifting.
- ✔ *Aventon ebikes are IPX4 water-resistant, meaning water splashing from any direction will not harm them.
